Dear Dr. Berger,

It is quite evident that in the year 2010 we must reach out and bring into fruition the best feasible source of renewable energy. Easier said than done. The volume of misconstrued facts, valuable time lost, to say nothing of wasted money at a time when the economy has been on a downward swing! This all brings to mind a quote from the book "Peter's Principle", "We rise to the level of our incompetence." How apropos!! Now we know the difference between forest biomass and non-forest biomass (waste wood). May we quickly move forward and start reaping the value of biomass renewable energy.

From a grateful, life-long (84 years) resident of Massachusetts,

Joyce E Platt  
Russell, MA
